JOURNAL RECOMMENDATION REPORT

TITLE OF STUDY

Crossing Boundaries and Creating Organizational Knowledge in a Women's Virtual Community

SHORT DESCRIPTION OF THE STUDY

The impact of virtual communities on the world of work and organizations has been gaining attention throughout the world. This qualitative research was a case study of an informal, gender-based community in the Israel Defense Forces. The research was based on the field of organizational knowledge and boundaries and the field of virtual communities. The findings indicate that the community was established in order to provide its members with support and knowledge and subsequently promoted ideas to improve the service in the organization. The article contributes to understanding the ability of an informal community of professional women to improve their lifestyles at work by means of virtual network communication. In addition, the findings shed light on how communities contribute to the work and environment.
