## Course Description

Mathematics is one of the foundational courses in the field of Business Studies and provides access to quantitative methods across disciplines. These basics are required in a variety of other courses and modules, for example in the field of investment and finance theory, micro- and macroeconomics, logistics or marketing, to name some examples. Consequently, mastery in Business Mathematics is a prerequisite for business economists and political economists alike to gain access to more advanced content. Following this approach, this course in Business Mathematics focuses on the economic application of mathematical methods.

## Course Outcomes

On successful completion, students will be able to

- identify basic economic mathematical tools and methods, recall them if necessary and apply them to other economic problems.
- understand mathematical derivations in later modules.
- access their own analytical conclusions.
- recognize quantitative relationships independently.
