Course Description

The aim of the course is to address the impact of the megatrend "digitalization " on HR management and the world of work. This trend offers HR departments the opportunity to redefine themselves. As a result of digitalization, HR departments are in a position to leave the classic role as "administrators" of personnel and turn to the value creation potential of HR departments. Therefore, the potential of the latest technological developments (such as artificial intelligence) for individual steps of HR management will be considered. A brief, overview-like description of the technologies for HR is fundamental. Although HR professionals do not need to understand these technologies in detail, it is necessary for them to know their core aspects regarding HR business processes. The course also discusses important framework conditions that cannot be ignored for successful digitalization. In addition, it focuses on the emergence of new professions and requirements as a result of digitalization. The dual digitization challenges of HR by contributing to the digital transformation and the transformation of the HR function are addressed as well.
