

# DYNAMYCO™

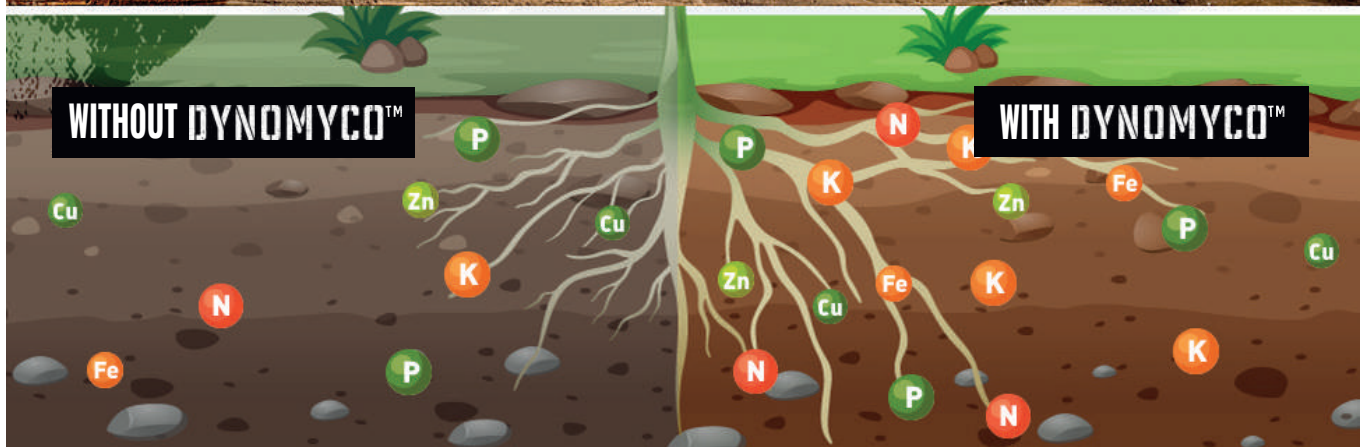

**DYNAMYCO™** is a groundbreaking mycorrhizal inoculant, based on 30 years of scientific research originating in Israel's Volcani Center (ARO) and confirmed in numerous trials with conventional and organic vegetable and herb farmers in Israel, the USA and Canada.

**DYNAMYCO™** was designed and formulated by a team of biologists, agronomists and soil health experts to help cultivators reach their plant's full potential in terms of yield, plant health and essential oil production. After extensive research, our product was first launched among medicinal plant and vegetable growers who experienced phenomenal results.

Today, **DYNAMYCO™** is widely available in the commercial market and enables growers worldwide to increase flower and fruit yields without compromising on quality.

## WHAT IS MYCORRHIZA?

**DYNAMYCO™** forms fungal hyphae that attach to and effectively extend root networks. The hyphae help plants absorb water and soil nutrients.

## WHAT SETS DYNOMYCO™ APART

- **Highly concentrated** - **DYNOMYCO™** boasts a high concentration of 900 propagules/g (3x the leading brand) of endomycorrhizal fungi, creating a hyphal network which extends and protects the plant's root system and enables it to better absorb nutrients and water.
- **Unique strains** - **DYNOMYCO™** contains several high performing vigorous strains of *Glomus intraradices* (A.K.A. *Rhizophagus intraradices*) and *Glomus mosseae* (A.K.A. *Funneliformis mosseae*).

- Many mycorrhizal products contain fungal species and strains that have no affiliation with vegetables and herbal plants (e.g. ectomycorrhizal fungi and other endomycorrhizal strains with no proven symbiotic relationship). However, **DYNOMYCO™** has been formulated specifically for these plants, and contains strains that have been scientifically researched and proven to have a mutualistic relationship with 90% of plants.

- **Produced in-house** - **DYNOMYCO™** is produced, manufactured and packaged by Groundwork BioAg. Our state-of-the-art lab employs innovative quality control and quality assurance techniques to ensure that each product contains exactly what is stated on the label. We stand by each package we deliver and guarantee that our products meet the highest standards.
