### $\mathsf{EXP}$

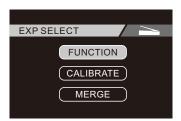

GE200 has a built-in expression pedal (EXP) and the facility to support a second external expression pedal (EXP2). To use an external expression pedal with GE200, connect it to the EXP2 input using a TRS stereo jack cable.

Both EXP and EXP2 can be assigned to control any effect parameter in any of the 9 effects blocks.

Both expression pedals can be calibrated and setup in the EXP menu.

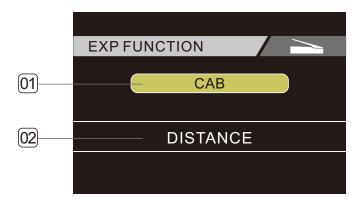

- EXP: Setup and calibrate the built-in EXP pedal
- EXP2: Setup and calibrate the external EXP2 pedal
- EXP VOL PEDAL ON/OFF: Activating this will assign the EXP pedal to behave like the MASTER volume control when the assigned function is not active. This setting is saved per individual preset.

- FUNCTION: Assign an effect parameter to the expression pedal
- CALIBRATE: Calibrate the expression pedal
- MERGE: Assign MERGE as the expression pedals function (Refer to the MERGE section of this manual for more details)

# **EXP FUNCTION**

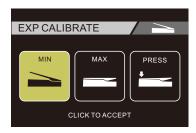

- 1. Select the effect block by rotating the VALUE control
- 2. Select the parameter by rotating the VALUE control

  Press the value control to toggle between effect block and effect parameter selection

Please note: Any parameter marked with an \* will also allow you to turn the effect block on/off when activating the EXP pedal. WAH \* POSITION \* for example

# **EXP CALIBRATE**

2. Set the pedal in the toe down position and press the VALUE control to confirm

 Set the pedal in the toe down position and apply forward pressure.
 Whilst applying forward pressure, press the VALUE control to confirm.
 This will set the sensitivity of the EXP pedals toe down activation switch

### **MERGE**

MERGE is a special function which allows you to control multiple parameters from any effects blocks and set the parameter value end points for both heel down and toe down positions. This can be used in many ways, but it's very good for blending seamlessly between two different sounds or having advanced control over special effects.

In this example we will show you how to control DELAY time, feedback and level simultaneously with the EXP pedal, using the MERGE function.

Activate EXP pedal and set in the heel-down position after assigning the MERGE function from the EXP settings menu. You must set up each parameter value one at a time.

- Open the DELAY effects block by pressing the DELAY button
- Set the EXP pedal in the heel down position
- Select the LEVEL parameter and set it to a value of 15
- Do not press the VALUE control again yet.....

- Set the EXP pedal in the toe down position
- Change the LEVEL parameter value to 60.
   (The box surrounding LEVEL will change colour)
- You can now control LEVEL between these two set value points using the EXP pedal
- Press the VALUE control to confirm and prepare to assign your next parameter

- Repeat steps 1 and 2 for the F.BACK with a value of 50 in the heel down position and 10 in the toe down position
- Repeat steps 1 and 2 for the TIME with a value of 300ms in the heel down position and 1200ms in the toe down position

Now try moving the EXP back and forth and you will see how all of the assigned parameters simultaneously move between their set end points. HAVE FUN!!!!

Whilst connecting the RIGHT output of GE200 direct to the PA system with the CAB SIM enabled.

ON: The CAB SIM is enabled for this output

THRU: The CAB SIM is disabled for this output

### **TRAIL**

Trial On function allows the trail of delay/reverb effects ton continue for a few seconds after the delay/reverb effects are turned off.

### For example:

- 1. When using CTRL to turn off the delay/reverb effects, the trail will continue for a few seconds after it has been turned off.
- 2. When switching between different presets, the trail will continue for a few seconds after switching.

# LOOPER MODE

#### LOOPER POSITION

In firmware V2.0, the PRE/POST looper function has been added. The signal chain is shown below:

PRE: The LOOPER will be placed in front of the effects chain in order to record the dry signal directly from your guitar. In PRE mode, the effects chain can be fed by the recorded track and you can adjust the effects chain in real time to get different output tracks.

POST: The LOOPER will be placed at the end of the effects chain in order to record the wet signal as the output from the GE200. In POST mode, the looper works as a traditional one does. Once the track is recorded, it cannot be affected by effects inside from the GE200.
